## Criterion E: Evaluation

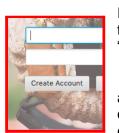

## **Success Criteria**

There is a login screen to validate the user entering the program.

When the program starts the first window is the "Login screen" where you have to enter a valid username and password to pass to the next screen.

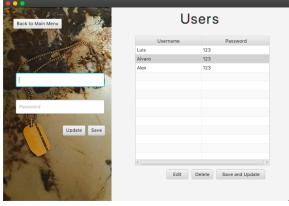

There is a screen to create a new user and you can edit/create/delete.

In the "Login screen" there is a button called "Create Account"

and when the admins credentials are entered correctly, you are sent to a screen where you

can create and save a new user to the application.

There is a screen for the profit and loss

After logging in the user can click the "Profit

statement.	and loss" button and are greeted with the appropriate information in a table.
There is a screen for orders and you can edit/create/delete.	After logging in the user can click the "Orders" button and are sent to the screen where they can create new orders.
There is a screen inside the Orders screen to create new Products and you can edit/create/delete.	After logging in and going inside the "Orders" screen the user can click the "Add Product" button and create a new product in a seperate screen.
There is a screen to send text emails.	After logging in the user can click the "Email" button and send a text mail using the companies predefined mail to send a mail to whom he chooses.
There is a screen for stock inventory.	After logging in the user can click the "Stock" button and are greeted with the appropriate information in a table with the stock information.
The order, profit/loss, users and stock screens have functional tables using csv data.	If you go to any of those screens there are tables that function correctly and display appropriate information.

## **Recommendations for Further Development**

Adding files and images to the "email sender" so client can send any type of file or text he chooses

Creating a simpler design for the orders GUI and the add products GUI

Make the security of the email sender better, to assure clients of safety needs.

Add a way to make more specific the "costs" so the user can take note of where the money of his investments is spent.

Create a mobile application for the program to improve agility when using it and add an online database so it can be saved across different platforms..
